

Does your company have control of emissions and discharges? How do you secure good quality on data for emission to air and discharge to sea? Acona provide expert consultants and services for exploration wells or production fields to ensure measurement programs comply with the legal requirements and will pass inspection during an audit.

### MORE INFORMATION:

Acona Environmental Services  
 Rådhusgata 17

### REQUIREMENTS

- Operators management systems must include a measurement program
- Operators should measure and report the correct values for all regulated components
- Samples must be representative for all actual discharges during the reporting period
- Analyses must be performed according to Norwegian standards or viable substitutes
- Off-site analyses must be performed by certified laboratories
- The measurement program shall include uncertainty of the methods, measurements and calculations

### SERVICES

- QA of measurement programs for fields and exploration wells prior to audits to ensure compliance
- QA and compliance check of subcontractor's measurement programs
- Prepare bridging document between operator and rig company
- Update measurement programs prior to or after audits according to the latest requirements
- Coordinator for establishing a measurement program for developing fields
- Establish measurement programs for exploration wells and/or fields

Our Environmental Advisors are highly experienced in establishing and reviewing measurement programs for both exploration wells and developing fields and have an in-depth understanding of the regulations and requirements of measuring programs. Our comprehensive services comply with current regulations and fulfil the expectations of the Norwegian Environmental Agency's for operators on the Norwegian Continental Shelf.
