

Well Engineering

Well engineering is a composite discipline including drilling and completions engineering, subsea engineering and production technology. The Exploration and Production industry is pushing into deeper and more remote waters. Smaller accumulations, tight and low-energy reservoirs are poised for development. High quality well engineering is a game-changing resource for the modern oil company.

In an era of well engineering skill shortages Acona group is unique in having a core workforce of well engineers and offshore supervisors trained to international standards, with a recognised five-year training program and industry-leading WIP® team training.

- Well design studies
- Relief well planning
- independent review and continuous audit of well control risks for rig owners, well operators and insurance underwriters

EXPERIENCE

Since 2008 Acona rig teams have delivered 65 NCS drilling and intervention projects on a full well management basis. Acona experience spans all of the NCS from the Barents Sea to Southern North Sea for clients ranging from small independent operators to major international oil and gas companies.

Alongside well management, Acona provides standalone well engineering services to E&P clients within the oil and gas industry.

WELL ENGINEERING SERVICES

- Peer reviews, incident investigation, well control reviews
- Drilling, workover and abandonment
- cost estimates

SINGLE PLACEMENT SERVICES

Acona is one of world's largest and most experienced well engineering groups. Acona staff have top-level expertise in drilling and well technology, offshore well operations and related disciplines. Our Single Placement division provides carefully-screened consultants in the following disciplines:

- Drilling Superintendents
- Drilling Supervisors
- Drilling Engineers
- Completion Engineers
- HSE Coordinators
- Drilling Materials Coordinators
- Well Cost Specialists
- Well Test Engineers
- Well Services Supervisors
- Subsea Engineers
