

Project Execution preparation and lessons learned one day workshop

Acona's Field Development Group provides senior experts to perform a dedicated workshop on execution preparations and follow-up procedures for offshore field develop projects for NCS based on extended experience within both project planning and execution of many mega and smaller offshore fields built and installed on NCS in the later years; from 2010 and onwards. In addition, these experts have also extended experience from international projects and have been involved in following up construction yards in Far-East, Middle East and Europe. The workshop will be focused on schedule and cost consequences of in-accurate early-phase work and design specifications.

Experience

Our personnel has experience in working as a multidisciplinary team, handling huge amount of documentation, extracting the vital information, analyzing all important aspects, identifying and judging the risk involved and summing up the evaluation in short and precise management reports.

Workshop main content

The workshop covers both the planning and the execution phase:

- Decision gates (DG process)
