P&A Consulting

Acona have a large pool of P&A engineers and supervisors that can be integrated in any organisation as a P&A team or as a single placement consultant.

Project management

Acona are providing projects related to P&A work. We have provided projects that gives a status for the overburden, evaluate and verifies assumptions and reduces uncertainties and cost for P&A operations.

Identification and verification of natural barriers may replace costly well operations. The PSA functional regulatory scheme requires activities to be controlled by management of risk and can be used to assess alternatives to the prescriptive NORSOK guidelines.

Well Engineering Services

Acona offer well engineering services for review and verification on how to solve the many P&A well integrity issues for a cost effective program. We can advise, facilitate, review and verify P&A well designs.
