

Acona’s user friendly environmental screening reports give an overview of all relevant environmental issues at an initial stage of the exploration phase. The report provides an early warning of potential environmental challenges and enable the licensee to address possible conflicts with third parties, initiate necessary studies, and conceivably reduce costs by preventing late changes and delayed operations.

SERVICE CONTENT

- Recommendations on activity periods for seismic surveys, site surveys and drilling activities
- Oil drift simulations with influence areas for sea surface, water column and shoreline
- Text and maps on biological resources and their vulnerability to oil spills
- Vulnerable areas
- Local fishery activity, aquaculture and cultural heritage sites
- Recommendations for oil spill contingency
- Environmental conditions
- Comments from public hearing rounds

CLIENT BENEFITS

- Enhances company environmental profile
- Enables early initiation of necessary studies
- Facilitates planning of activities in least vulnerable periods
- Predictability in requirements from authorities
- Prevention of conflicts with third parties, including fisheries
- Reduces cost by early planning
- Head-start on oil spill contingency planning
- Smooth implementation of planned operations

The marine biologists in the environmental services team are highly experienced in identifying environmental challenges for the petroleum industry and have an in-depth understanding of the regulations governing petroleum activities on the Norwegian sector. The scientific background and experience of our advisors ensures that our environmental screening reports are grounded in a comprehensive understanding of the marine environment, and balance the development of petroleum resources with environmental protection.

For more information, or to order a study, please contact Manager Environmental Services, Julie Damsgaard Jensen, +47 971 93 743
