Rig Audit – Contracting, intake start up process and follow up

- Pre contract – verification and assessment of capability, compliance, AoC and competence
- After contract – audit, inspection, and verification before start up
- New rig and upgrades – People, plant and Process Integrated Acceptance Test (IAT), a full operability testing of all systems and people competencies to operate rig and equipment. Can be integral to final commissioning.
- Follow up – periodic (biannual) audit of drilling contractor and rig reliability and performance

Compliance Services

- Verification for rig AoC («SUT – samsvarsuttalelse»)

Rig Intake

- We establish multi-discipline teams to deliver rig intake. We use in-house developed experience and protocols

Special Rig Audit/Reviews tailored for Client needs e.g.

- HPHT equipment and procedures
- Well Control equipment/procedures – reliability of BOP and control system
- Rig Containment Audit – waste and fluid pollution risk mitigation
- Contractor Management System health check
- Review of drill floor rig crew performance
