

Well Management

Offshore drilling is our core business. Our large group of Well Engineers and Wellsite Supervisors with an excellent track record of high-quality wells delivered. Acona WM is equipped to deliver safe and efficient wells for our E&P clients tailor made to your need.

Acona group offers a full design and drilling service for your wells. This capability is built on high-quality personnel, hands-on experience, proven management system, procedures and systems.

Acona teams work in “bolt-on” mode under the client corporate identity, integrating seamlessly with client management systems.

Since 2008 Acona WM teams have delivered over 68 NCS drilling and intervention projects on a full well management basis.

Our experience spans all over the NCS from the Barents Sea to Southern North Sea for clients ranging from small independent operators to major international oil and gas companies.
